

Is communication within your company a daily challenge? Are urgent calls going unanswered? With NetPage, you can now reach whomever you need no matter where they are in the building.

Help your staff be more productive by increasing interoffice communication. With NetPage, each staff member with a computer connected to a server can page coworkers with specific text messages and it only takes a few clicks right from their desktop.

The system consists of a transmitter, NetPage software, and numeric or alphanumeric pagers. Each employee is issued an LRS pager. The transmitter is connected to the server running the NetPage software while each user runs the NetPage client on their computer (NetPage ships with a license for up to 10 users, additional licenses may be

purchased at any time.) When an employee needs to be notified, they are selected from the pager list, a message is entered in the message field and the send button is selected sending the message immediately.

T74C232 Transmitter

Benefits
