

Adver-Teaser™

Coaster Call®

Customer paging allows pharmacies to locate customers throughout the store as well as ensure confidentiality.

Long Range Systems has developed on-premise customer paging to give pharmacies flexibility in locating customers. When customers place their prescription to be filled they can be given a pager to notify them when it's ready. With the Trinity, customers can be paged on their cell phone as well as on premise pager. They are no longer confined to waiting areas where minutes seem like hours. This will increase store sales as customers can roam freely to locate additional items. Customers also appreciate the confidentiality a silent paging system provides.

Customer Pagers:

- Adver-Teaser™** The guest pager that allows you to advertise using a standard business card. One-piece construction with no exposed screws.
- Coaster Call®** The world's first UHF pager in a coaster! New design is virtually indestructible. Often copied, never duplicated.

Transmitters:

- T7400** Primary UHF transmitter used with Coaster Call and Adver-Teaser Pagers.
- T7450 Trinity** Guest paging system that pages customers via on-site pager, or their own cell phone or pager.

Features and Benefits

- Patient Confidentiality - allows families and patients to maintain privacy.
- Overhead paging is eliminated resulting in a quieter atmosphere.
- Allows customers to freely roam store to locate additional purchases.
- Customers can be notified immediately optimizing staff productivity.
- Anti-theft - each pager has a built-in feature that allows it to be located; therefore, minimizing pager loss.
- Trinity System can page customers on their own cell phone with a pre-recorded message.
- Various Paging Modes – Flash, beep, vibrate, and glow.
- 24/7 Technical Support
