

Whether you're replacing that old call bell or streamlining your entire operation, we have the server pager system that fits your needs. Server pagers will enable the staff to spend more time with guests increasing customer service and check averages, and alert them when food is ready so they can get it out to the guest while it's still hot.

Two types of Server Pagers:

- Battery Operated Vibe-Only and Numeric Pagers
- Re-Chargeable Star Pagers

Transmitters:

- T9000K** Our premier transmitter used with all Server Paging Systems. Can accommodate up to 99 pagers.
- T9000K-1** Same as the T9000K, except in a "1-touch" version. Can accommodate up to 21 pagers.
- T9000KC** The cancel panel for all T9000 products. Requires servers to cancel page when food has been picked up. Otherwise, they will be paged up to three times before a manager or food runner is paged. Servers can also page other members of the staff or managers from the cancel panel.
- T9500LCM** This low-cost, easy-to-use transmitter can page up to 999 server or guest pagers. Recommended for sites less than 3000 square feet.
- T9500LCK** Handles up to 12 Star Pagers and allows "one-touch" operation. Runs on 110V or rechargeable battery.

Features of Server Pagers Include:

- **Wireless programmability** – Allows restaurants to program the pager number easily from the transmitter. Reduces the cost of the systems by only buying pagers for the number of servers you have on the floor at one time.
- UHF Frequency – For better signal penetration of walls and floors - sends a strong vibration to server.
- Anti-Theft & Auto-Locate – Helps minimize pager loss.
- Nickel Metal Hydride Batteries – For longer battery life and no "memory" problems.
- We ARE the manufacturer. We manufacture quality pagers that are water resistant and durable.
- Easy care and lifetime warranties available to maintain paging system.
- 24/7 Technical Support.
